JavaScript Engineer (Mid-level / Senior) @ Medical Software Start-Up, Zürich

We are a small and highly motivated team of software engineers, medical doctors and sales & support specialists. A symbiotic mix of dreamers and pragmatists, of passionate and level-headed folks. The result? An exciting place to work and a successful Web app used every day by hundreds of Swiss doctors.

Only, that's not the end of the road; we have ambitious plans. And to support them, we need to keep evolving our current products and scale, improve and professionalize the technology that constitutes the core of our company.

That's where you come in. You will focus on platform development and drive the technological aspects of our main product: a SaaS app entirely built with modern technologies. The role offers freedom, ownership, having a measurable impact on the company's activities and the benefits of working with a nimble, passionate team. We believe in committed partners and as such, your generous salary can include a substantial amount of shares.

Your role

- Mid-level / Senior full-stack JavaScript engineer: drive the development of new key features and important code refactorings to ensure our codebase and product are of the highest quality (stack: Node.js, Meteor, Electron, CoffeeScript/ES6)
- DevOps: leverage your experience to scale our existing infrastructure and professionalize its critical aspects (stack: MongoDB, Debian, Docker containers, Nginx, Jelastic)
- Dev teamwork (depending on experience): help overview ongoing tasks, mentor junior devs, assist in project management, help break down features, define best practices and present and discuss results with the rest of the company
- As part of a small team with a hands-on culture, occasionally interface with clients to understand their needs, regularly give a hand for support and take part in decision making at every level of the company.

Requirements

- Mid to senior-level experience in both full-stack JavaScript development & DevOps (advanced Meteor experience a plus)
- Existing experience with or interest in developing "tech lead" skills
- Past exposure to or strong desire to work in small teams with a "get things done" attitude
- Commutable distance to Zürich (Oerlikon area), Switzerland, or ability to move here. Flexible home-office policy.

Want to know more about us?

Our aim is to reinvent medical software from the ground up, putting passion and customer-care into our products. To do so, we take influences from many different sources. Two talks that represent parts of our values are "Simple made easy" by Rich Hickey (tech) and "Reinventing Organizations" by Frédéric Laloux (company).

By the way, we are in the process of building a brand new, awesome website. Please don't judge us on the current one which was made by our medical doctors :)
