

## Full-stack JavaScript Developer (Senior, German-speaking)

Medical Software, Zürich (on-site), startup-like environment.

We are a small and highly motivated team of software engineers, medical doctors and sales & support specialists. A symbiotic mix of dreamers and pragmatists, of passionate and level-headed folks. The result? An exciting place to work and a successful cloud platform used every day by hundreds of Swiss doctors & more.

Only, that's not the end of the road; we have ambitious plans. And to support them, we need to keep evolving our current products and scale, and improve the technology that constitutes the core of our company.

That's where you come in! You will focus on platform development and drive the technological aspects of our main product: a SaaS app entirely built with modern technologies.

### Your role

- Senior-level full-stack JavaScript engineer: drive the development of new key features and important code refactorings to ensure our codebase and product are of the highest quality (stack: Node.js, Meteor, Electron, ES6/TypeScript/CoffeeScript)
- DevOps (optional): leverage your experience to scale our existing infrastructure and professionalize its critical aspects (stack: MongoDB, Linux servers, Docker, Nginx)
- Dev teamwork: work closely with the other devs, assist in project management, help refine features, define best practices and present results to rest of the company
- As part of a small team with a hands-on culture, interface with clients to understand their needs, give a hand for tech support, and take part in decision-making at every level of the company.

### Requirements

- Strong mid- to senior-level experience in full-stack JavaScript development. Devops experience a plus
- Fluent German-speaking ability (Swiss-German a plus)
- Existing experience with or interest in developing "tech lead" skills (feature design, architecture, project management, etc.)
- Past exposure or strong desire to work in small teams with candid, pragmatic and results-oriented culture
- Commutable distance to Zürich Oerlikon. Home-office: 1-2 days/week possible.

Liris Tech AG

Regina-Kägi Strasse 11, 8050 Zürich
